

Method for Conducting a Shareholders Meeting with Remote Participation Using a Network

ABSTRACT OF THE DISCLOSURE

The present invention provides a method for conducting a shareholders meeting when shareholders can participate in the shareholders meeting through a network without having to actually go to the meeting hall of the shareholders meeting. Remote shareholders are assigned to satellite sites in order to spread the processing load among the satellite sites. Among the meeting site, satellite sites, and remote shareholder sites of the sponsoring company, votes from remote shareholders sites are tabulated on the satellite sites and sent to the meeting site. Voting can be performed promptly because of hierarchical vote tabulation on a plurality of satellite sites and at the meeting site.
